

How to Make A Teddy Bear Den

You will need:

- * Sticks of different sizes
- * A tree
- * Leaves, grasses, bark and items to cover the den.

1. Find a tree where you can build your den and clear the area.
2. Take a long stick and place it so that it is leaning up against the tree. This will form the ridge-line of your structure.
3. Lean sticks against the ridge-line, putting shorter sticks near the part closest to the ground and longer sticks nearer the tree.
4. Cover the den structure with leaves, moss and different plants, remembering to leave a doorway for your bear.
5. Put your bear inside its den.
6. You could add things to the den for your bear like a fire, a table or even a garden.
7. Have fun!
